MS52SF3-N32WB031KEQ6-2

Ultra-low power consumption, cost-effective Bluetooth 5.1 module with optional external antenna support

The MS52SF3 is a highly flexible, ultra-low power, cost-effective Bluetooth module based on the N32WB031KEQ6-2. Its powerful Arm® Cortex®-M0 CPU with a core speed of 64Mhz, 512kB FLASH program space and 48 KB SRAM memory, as well as other powerful supporting resources provide the perfect solution for Bluetooth connectivity. It supports LPUART, USART, SPI, I2C, I2S and other communication interfaces. It can be used in data transmission, smart home, Bluetooth remote control and other application scenarios.

FEATURES

Bluetooth 5.1

High quality-price ratio

Ultra-low power consumption

Support optional external antenna

KEY PARAMETER

MS52SF3-N32WB031KEQ6-2			
Chip Model	N32WB031KEQ6-2	**Antenna**	PCB
Module Size	15.8×12×2mm	**GPIO**	14
Flash	512KB	**RAM**	48KB SRAM
Receiving Sensitivity	-96dBm	**Transmission Power**	-20 ~ +6dBm
Current(TX)	0dBm- 4.2mA	**Current(RX)**	3.8mA

APPLICATION

Smart Home

Consumer Electronics

Smart Healthcare

Sports and fitness Equipment

Security Equipment

Automotive Equipment

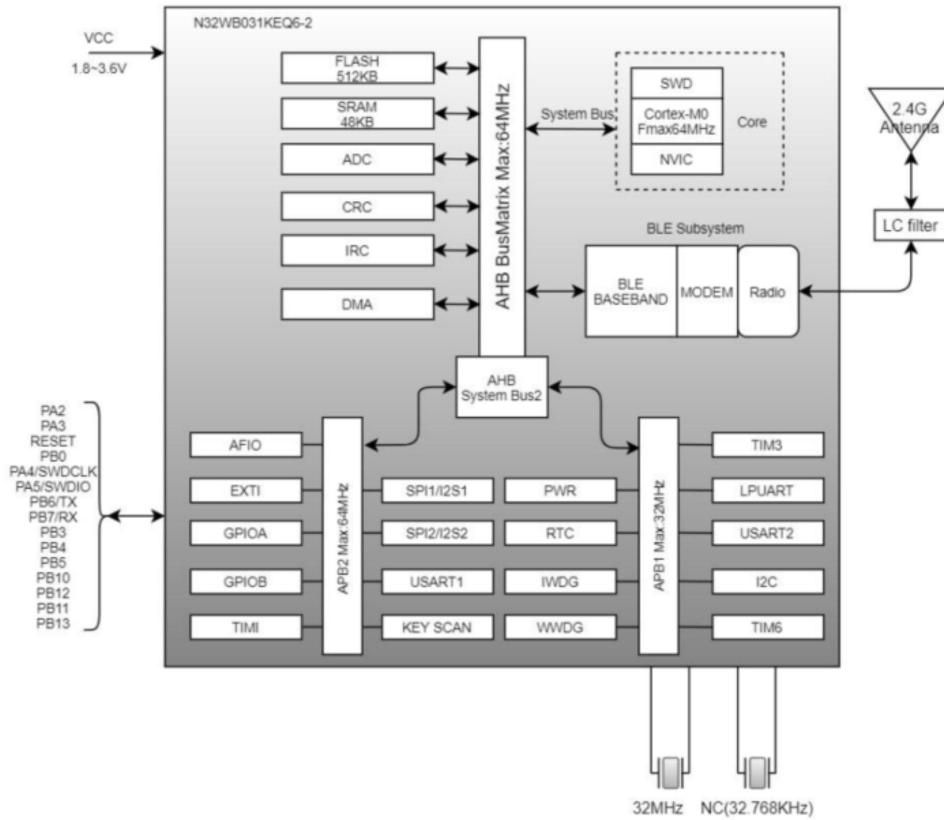
1 BLOCK DIAGRAM



2 ELECTRICAL SPECIFICATION

Parameters	Value	Notes
Working Voltage	1.7V-3.6V	To ensure RF work, supply voltage suggest not lower than 2.3V
Working Temperature	-40℃~+85℃	Storage temperature is -40℃~+105℃
Transmission Power	-20 ~ +3dBm	Configurable
Current(RX)	3.8mA	RF receiving current under 1Mbps pattern
Current(TX)	4.2mA	RF transmission current under odB pattern
Module Dimension	15.8*12*2mm	
Quantity of IO Port	14

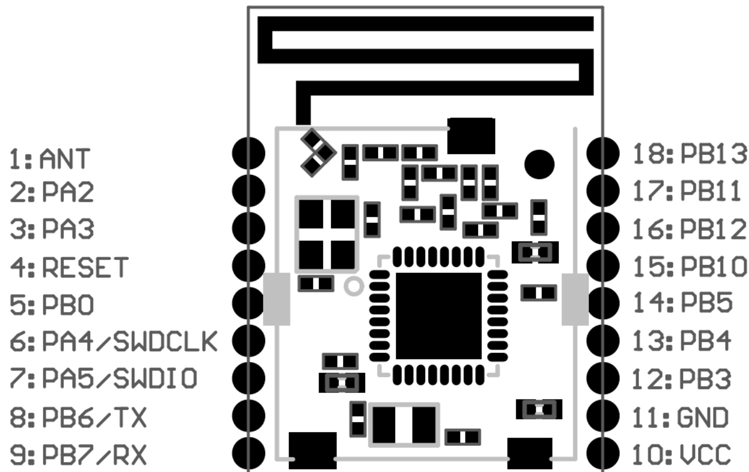
3 PIN DESCRIPTION



4 PIN DEFINITION

Pin Number	Symbol	Type	Definition
1	ANT	External Antenna Pin	By default, the module comes with an antenna, this pin is directly suspended. If you don't use the module antenna, you can connect an external antenna through this pin, when connecting an external antenna, the module needs to connect the resistor with the antenna to this pin; you need to explain the configuration requirements with the salesperson.
2-3	PA2/PA3	GPIO	General Purpose IO Ports
4	RESET	Asynchronous Reset Pin	reset
5	PB0	GPIO	General Purpose IO Ports
6	PA4/SWDCLK	I/O，SWCLK	I/O pin multiplexing, burn-in pins, burn-in only need to connect the power supply pin, ground, and these two pins
7	PA5/SWDIO	I/O，SWDIO	I/O pin multiplexing, burn-in pins, burn-in only need to connect the power supply pin, ground, and these two pins
8	PB6/TX	I/O，TX	I/O Pin Multiplexing, UART TX
9	PB7/RX	I/O，RX	I/O pin multiplexing, UART RX
10	VCC	Positive Power	Power supply, 1.7V-3.6V with this pin
11	GND	Negative Power	GND
12-18	PB3/PB4/PB5/PB10 /PB12/PB11/PB13	GPIO	General Purpose IO Ports

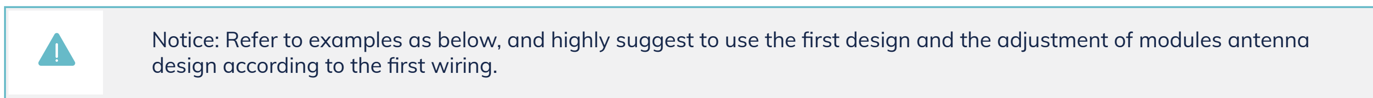
7 PCB LAYOUT

There should be no GND plane or metal cross wiring in the module antenna area, and components should not be placed nearby. It is best to make a hollow or clear area, or place it on the edge of the PCB board.



Notice: Refer to examples as below, and highly suggest to use the first design and the adjustment of modules antenna design according to the first wiring.

Layout Notes:

1) Preferred Module antenna area completely clearance and not be prevented by metals, otherwise it will influence antenna's effect (as above DWG. indication).

2) Cover the external part of module antenna area with copper as far as possible to reduce the main board's signal cable and other disturbing.

3) It is preferred to have a clearance area of 4 square meter or more area around the module antenna (including the shell) to reduce the influence to antenna.

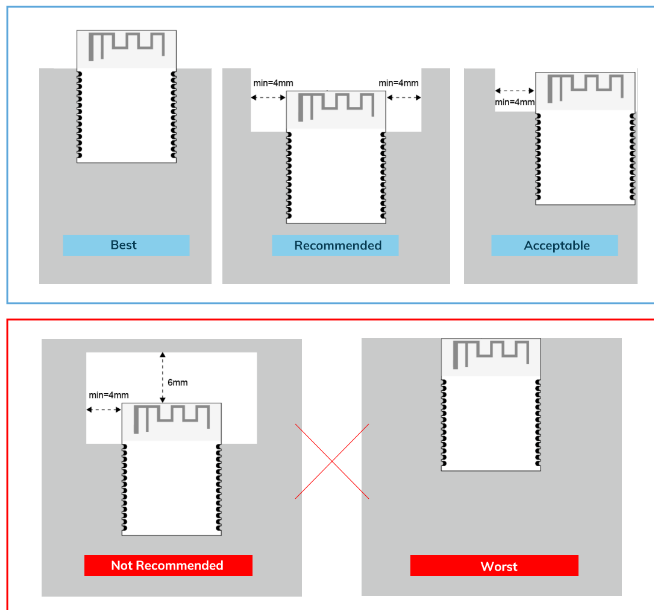
4) Device should be grounded well to reduce the parasitic inductance.

5) Do not cover copper under module's antenna in order to avoid affect signal radiation or lead to transmission distance affected.

6) Antenna should keep far from other circuits to prevent radiation efficiency reduction or affects the normal operation of other lines.

7) Module should be placed on edge of circuit board and keep a distance away from other circuits.

8) Suggesting to use magnetic beads to insulate module's access power supply.



8 REFLOW AND SOLDERING

1) Do SMT according to above reflow oven temperature deal curve. Max. Temperature is 260℃;
Refer to IPC/JEDEC standard; Peak TEMP<260℃; Times: ≤2 times, suggest only do once reflow soldering on module surface in case of SMT double pad involved. Contact us if special crafts involved.

2) Suggesting to make 0.2mm thickness of module SMT for partial ladder steel mesh, then make the opening extend 0.8mm

3) After unsealing, it cannot be used up at one time, should be vacuumed for storage, couldn't be exposed in the air for long time. Please avoid getting damp and soldering-pan oxidizing. If there are 7 to 30 days interval before using online SMT, suggest to bake at 65-70 ℃ for 24 hours without disassembling the tape.

4) Before using SMT, please adopt ESD protection measure.

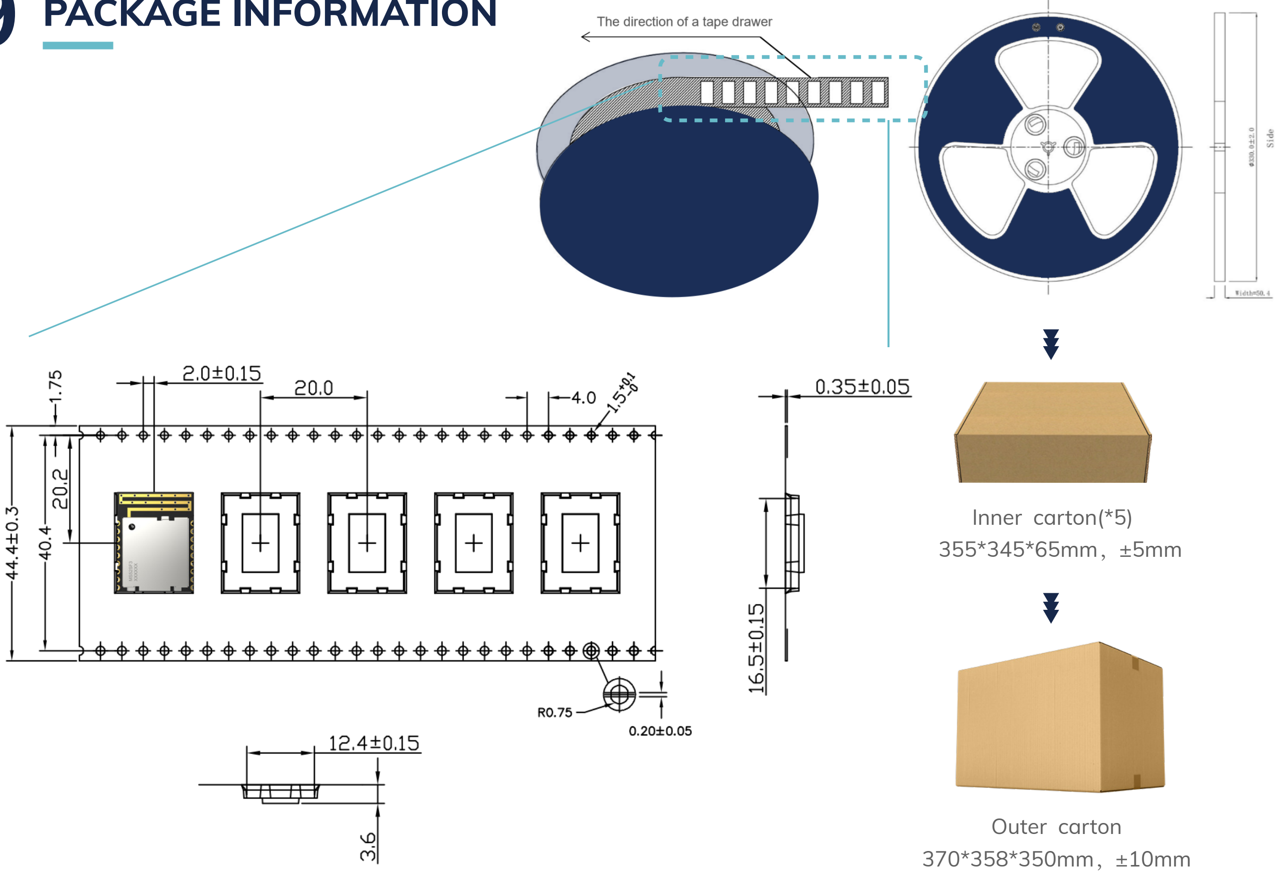
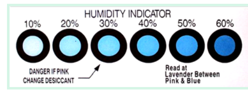
9 PACKAGE INFORMATION



Remarks

General material list for FCL packaging:

Carrier tape packaging tray



Humidity Indicator
(1 pcs/bag)

Desiccant
(placed in a vacuum bag)

Vacuum bag

Inner carton(*5)
355*345*65mm，±5mm

Outer carton
370*358*350mm，±10mm

Other:

Moisture-proof label (attached to the vacuum bag)

Certification label (attached to the vacuum bag)

Outer box label

Default unit：mm Default tolerance：±0.1

Packing detail	Specification	Net weight	Gross weight	Dimension
MS52SF3	850PCS	425g	1300g	W=44mm，T=0.35mm

Note: Default weight tolerance all are within 10g（except the special notes）

10 STORAGE CONDITIONS

- **Please use this product within 6 months after signing the receipt.**
  - This product should be stored without opening the package at an ambient temperature of 5~35°C and a humidity of 20~70%RH.
  - This product should be left for more than 6 months after receipt and should be confirmed before use.
  - The product must be stored in a non-corrosive gas (Cl2, NH3, SO2, NOx, etc.).
  - To avoid damaging the packaging material, do not apply any excessive mechanical shocks, including but not limited to sharp objects adhering to the packaging material and product dropping.

- **This product is suitable for MSL2 (based on JEDEC standard J-STD-020).**
  - After opening the package, the product must be stored at ≤30°C/<60%RH. It is recommended to use the product within 3-6 months after opening the package.
  - When the color of the indicator in the package changes, the product should be baked before welding.

- **Baking is not required for one year if exposure is limited to <30°C and 60%RH. Refer to MSL2 for exposure criteria for moisture sensitivity level. If exposed to (≥168h@85°C/60%RH) conditions or stored for more than one year, recommended baking conditions.**
  1. 120 +5/-5°C, 8 hours, 1 time
  Products must be baked individually on heat-resistant trays because the materials (base tape, reel tape, and cover tape) are not heat-resistant, and the packaging material may be deformed at temperatures of 120℃;
  2、90℃ +8/-0℃，24hours，1times
  The base tape can be baked together with the product at this temperature. Please pay attention to the uniformity of heat.

11 HANDLING CONDITIONS

• Be careful in handling or transporting products because excessive stress or mechanical shock may break products.
• Handle with care if products may have cracks or damages on their terminals. If there is any such damage, the characteristics of products may change. Do not touch products with bare hands that may result in poor solder ability and destroy by static electrical charge.

12 QUALITY

Cognizant of our commitment to quality, we operate our own factory equipped with state-of-the-art production facilities and a meticulous quality management system. We hold certifications for ISO9001, ISO14001, ISO27001, OHSA18001, BSCI.

Every product undergoes stringent testing, including transmit power, sensitivity, power consumption, stability, and aging tests. Our fully automated module production line is now in full operation, boasting a production capacity in the millions, capable of meeting high-volume production demands.
